

Nguyễn Tuấn Duy

FullStack Software Engineer

✉ johnluy1999@gmail.com ☎ (VN +84) 834120699 📍 HaNoi, VietNam 🔗 <https://syllitas.com>

PROFESSIONAL SUMMARY

- 3+ Years as a Senior Full-stack developer.
- 4+ Years of experience in Backend using NodeJS with JavaScript and TypeScript.
- 2+ Years of experience in Frontend with JavaScript-based web development using ReactJS.
- 2 Years of experience in Amazon Web Services.
- A year as a backend team leader.
- Experience in using methodologies: OOP, UML, Design Patterns, and Agile Scrum.
- Experience in handling SQL databases: MySQL, Oracle, MariaDB, MongoDB, DynamoDB, etc.
- Experience in Software Development Environment: Sublime Text, Visual Studio, and Visual Studio Code.
- Experience in DevOps: CI/CD, Deployment, Terminal, Git, bash, etc.

PROFESSIONAL EXPERIENCE

Birdeye.so (Blockchain Company), <i>Senior Backend Engineer + Data Engineer</i>	09/2025 – now Singapore
FPT Smart Cloud (AI Company), <i>Senior FullStack Software Engineer + Data Engineer</i>	04/2024 – 09/2025 VietNam
EMDDI (Software Company), <i>Senior Backend Software Engineer</i> Working with XanhSM (logistic company)	07/2023 – 04/2024 VietNam
Mor Software (Software Company), <i>Fullstack Software Engineer</i>	05/2023 – 07/2023 VietNam
FPT Software (Offshore for Quadient) (Software Company), <i>Middle Fullstack -> Senior Backend, Team Lead Backend</i>	07/2021 – 05/2023 VietNam
Hanoi Telecom (Software Company), <i>Fullstack Software Engineer & Data Analysis</i>	10/2020 – 07/2021 VietNam
Vietnam Academy of Science and Technology (VAST), <i>Internship -> Fullstack Developer</i> Internal Government Company	06/2019 – 09/2020 VietNam

SOFTWARE

Programming Languages — JavaScript | Typescript | Python | Golang, **Databases** — MySQL | MongoDB | DynamoDB | ElasticSearch | Redis | Cassandra | Clickhouse, **Configuration Management tools** — Github | GitLab | BitBucket, **Data** — Debezium | MageAI, **Message-Queue** — Kafka | RabbitMQ | BullMQ, **Deployment/CICD** — Jenkins | Gitlab CI/CD | Github Action | Docker/Docker Compose | Nginx | Kubernetes (k8s) | Pm2

LANGUAGES

Vietnamese

Native

French

Elementary Proficiency, A2 - B1

English

Fluent in Communication, TOEIC 690/990

PROJECT LIST

Birdeye.so, (*Domain: Blockchain*) 09/2025 – now
Position: Fullstack Software Engineer Project Description: Birdeye.so, a leading on-chain crypto data aggregator and analytics platform trusted by millions of traders since 2022. Birdeye provides real-time token prices, live charts, trade history, wallet analytics, trending insights, and multi-chain market intelligence across Solana, Sui, Ethereum, Base, and major EVM chains, integrating data from 350+ DEXes and AMMs. It empowers traders to spot opportunities early, make data-driven decisions, and also offers powerful APIs for developers and AI agents to access accurate, real-time on-chain data. Team Size: > 100 people Responsibilities:

- Define technical solutions, tasks, and estimate.
- Review code, fix bugs and support other members.
- Design and find out solution
- Contact third party for business
- Create tools for internal task.
- Crawl/Streaming Data
- Handle realtime multi-services
- Create AI Agent to solve internal tasks for company

Technologies Used:

- Programming language: JavaScript, TypeScript
- Database: MongoDB, Clickhouse, Redis, ElasticSearch
- Tools: Jira
- AI Model: DeepSeek B1, OpenAI GPT 4.1
- Framework: ReactJS, NodeJS, ExpressJS, VueJS, FastJS, NextJS
- Communication method: RESTful API, SocketIO, gRPC, RabbitMQ, etc...

AI Mentor, (*Domain: AI Agent*) 04/2024 – 09/2025
Position: Fullstack Software Engineer/ Backend Team Leader Project Description: AI Mentor is a virtual assistant that accompanies companies to hone their employees' capabilities in all aspects. Team Size: 17 people Responsibilities:

- Define technical solutions, tasks, and estimate.
- Review code, fix bugs and support other members.

- Design and find out solution
- Contact third party for business
- Implement user stories and features.
- Create tools for internal task.
- Leading, breaking tasks for 6 backend developers.
- Create a CDC (change data capture) for training model AI and generate products for BA team.
- Negotiating with others labs in company.

Technologies Used:

- Programming language: JavaScript, TypeScript, Go lang
- Database: DynamoDB (v3), MySQL
- Tools: Jira
- AI Model: DeepSeek B1, OpenAI GPT 4.1
- Framework: ReactJS, NodeJS, ExpressJS, VueJS, FastJS, ...etc
- Communication method: API, SocketIO, message-queue (bullMQ, Kafka)
- Deployment: k8s, gitlab cd/cid

XanhSM, (Domain: Logistic)

07/2023 – 04/2024

Position: Backend Software Engineer Project Description: Xanh SM is the brand name of the first electric taxi service from the Republic of Vietnam. Currently, we are continuing to expand our services in the international market...through different services. Our services are served by VinFast electric vehicles, which are vehicles that do not emit pollution, do not smell of oil, do not make noise of the engine, good for health and friendly to the environment. With a team of drivers who have been professionally trained, have specialized skills according to the principles, and provide sincere service, for this reason, Xanh SM guarantees the quality of excellent 5-star service to users. Team Size: 50 people

Responsibilities:

- Define technical solutions, tasks, and estimate.
- Review code, fix bugs and support other members.
- Design and find out solution
- Contact third party for business
- Implement user stories and features.
- Handle all task about payment in app: prepay/postpaid.
- Binding/unbinding account for user
- Connect ZaloPay/Viettel Money/VnDirect/Bank/Visa/QR for payment method

Technologies Used:

- Programming language: JavaScript, TypeScript, Go lang
- Database: DynamoDB (v3), MySQL
- Tools: Jira
- Framework: NodeJS (ver19-20), ExpressJS, BunJS, FastJS, ...etc
- Communication method: RESTful API, SocketIO, gRPC, message-queue (bullMQ, RabbitMQ), etc...

Talent Assessment, (Domain: Education)

05/2023 – 07/2023

Position: Fullstack Software Engineer Project Description: The "Talent Assessment" project involved developing a robust system for creating and evaluating exams. This system streamlined the exam generation process, guaranteed scoring, participant management, and result reporting. Its purpose was to enhance the efficiency and transparency of candidate assessment. Team Size: 9 people

Responsibilities:

- Define technical solutions, tasks, and estimate.
- Code and implement for security system.
- Review code, fix bugs and support other members.
- Design and find out solution

- Implement user stories and features.
- Configuring CI/CD: Jenkins and Deployment.

Technologies Used:

- Programming language: JavaScript, bash, lua
- Database: MongoDB, PostgreSQL
- Tools: Jira
- Framework: NodeJS (ver20), Prisma, Apollo Server, ExpressJS, etc
- Communication method: RESTful API, GraphQL

PLS-Merge, (*Domain: Logistic*)

02/2022 – 05/2023

Position: Fullstack Software Engineer Project Description: PLS - Merge is a project for analyzing new business of parcel locker for residential area in some countries like EU, UK, Japan. The parcel locker helps client can store their stuff which is come from the delivery man in a limited time. Team Size: 55 people Responsibilities:

- Define technical solutions, tasks, and estimate.
- Code and implement for security system.
- Review code, fix bugs and support other members.
- Design and find out solution
- Implement user stories and features.
- Configuring CI/CD: Gitlab and Deployment.
- Customizing api with Nginx
- Working with auto test and manual test.

Technologies Used:

- Programming language: JavaScript, bash, lua
- Database: ElasticSearch
- Search Engine: ElasticSearch
- Tools: Jira
- Framework: NodeJS (ver12-16), CucumberJS, ReactJS, etc...
- Communication method: RESTful API, Message Queue, WebSocket
- Service: RabbitMQ, Redis, Nginx, Docker, SocketIO

NeopostLab, (*Domain: Logistic*)

07/2021 – 02/2022

Position: Full-stack Software Engineer Project Description: NeopostLab is a project to research solution for Quadient. When Quadient has an idea, they request project to have a solution and make POC quickly. The output of team will be handle by another development team who will make it as a product or the team will develop directly the product. Team Size: ~17 people Responsibilities:

- Define technical solutions, tasks, and estimate.
- Code and implement for security system.
- Review code, fix bugs and support other members.
- Design and find out solution
- Implement user stories and features.
- Configuring CI/CD: Gitlab and Deployment.
- Customizing Cloudformation and Serverless.
- Working with auto test and manual test.

Technologies Used:

- Programming language: ES6, JavaScript, CSS, HTML, Python, Golang, cURL, XML, bash
- Database: DynamoDB, MongoDB
- Search Engine: ElasticSearch/OpenSearch
- Tools: Target Process
- Template Engine: Handlebars

- Framework: NodeJS (ver 12-16), ReactJS, Serverless (ver 2-3), Apollo Server, etc...
- Communication method: RESTful API, GraphQL, SOAP
- Service: Amazon Web Services (AWS),
- API Management: apidocjs

Supporting company business: AMIS +,

10/2020 – 07/2021

Discord Bot + Google Data Studio

Position: NodeJS Fullstack developer Project Description: Managing and statisticizing customer information. Team Size: ~10 people Responsibilities:

- Frontend:
- Designing interface by applying UI/UX knowledge.
- Applying Ajax for calling data from backend.
- Backend: o Handling data from frontend.
- Validating and optimizing data for storing to Database.

Technologies Used:

- Programming language: JavaScript, CSS, HTML, JQuery
- Database: SQLite, Active Directory
- Tools: Jira, Google Sheet
- Template Engine: PugJS
- Framework: NodeJS, DiscordJS, Zapier
- Communication method: RESTful API, LDAP, Web hook
- Service: Google Console

Lung Cancer Care, (Domain: Health Care)

06/2020 – 09/2020

Position: Internship fullstack developer Project Description: Because of the dangerous and rapidly increasing the rate of lung cancer, the system that initially assists doctors in the diagnosis of primary non small cell lung cancer based on computer tomography has been created which named Radiologist and image management on lung cancer care website. Customer: VAST Team Size: 8 people

Responsibilities:

- Frontend:
- Designing and visualizing CT images on website o Optimizing request to backend, o Validating and improving security.
- Creating function that help doctors can note, resize, calculate, remarking coordinates, etc.
- Backend: o Validating request from frontend.
- Storing client information in database, o Applying security when storing data, o Designing database.

Technologies Used:

- PHP, Jwt, MariaDB, ConventionJS, HTML, CSS, Bootstrap 4, Javascript
